Carl Lane
Sprint 3

Objective of research

The objective of this research is to search for a python related GUI to run our mock ups in. Then after I find the GUI make a sample mock up

Findings of research

During this research I figured out that there were many gui's that I was able to use to figure out the gui implementation. Though there were others on my list such as PY QT, I still chose GTK 3+ due to the simplicity of use. Gtk has been around for a decent amount of time and is pretty reliably partnered with python. Some risks of gui's in general is that some gui's may lack other features that a current gui may have.

Conclusion

In conclusion, considering that GTK works best for me and also gets the job done, it is going to be the gui platform we will be using moving forward in the project. I enjoyed working with other gui's to gain more experience in the area considering that I'm a little new to GUI implementation.
